Cupertino, CA

EDUCATION

- **Carnegie Mellon University Silicon Valley** Mountain View
Master of Science in Software Engineering Jan. 2018 – May. 2019
- **Nanyang Technological University** Singapore
Bachelor of Engineering, Electrical and Electronic Engineering; GPA: 4.61/5.0 Aug. 2010 – May. 2014
- **Courses:** Foundations of Computer Systems, Data Structure and Algorithm, Practical Data Science, Foundations of Software Engineering

TECHNICAL SKILLS

- **Languages:** Java, Python, C, Shell, HTML, JavaScript, SQL
- **Technologies:** Android, Angular, Angular Material, Ceph, Consul, Docker, Docker Compose, Express.js, Gradle, gRPC, Google Guava, HOCON, Linux, MapReduce, MongoDB, Node.js, NumPy, Pandas, Registrator

WORK EXPERIENCE

- **Moqi.ai (Java, Shell)** Beijing, China
Software Engineer Intern May 2018 - Aug 2018
Designed and implemented fingerprint system fault tolerance that improved system uptime from 93% to 99%
 - **Ceph Filesystem:** Set up **Ceph Filesystem** with **Erasur Coding** as main distributed storage for segments cached in matching servers' memory.
 - **Fingerprint System Docker Compose:** Simplified fingerprint system testing through creating **docker compose** file to run the entire fingerprint system on a single server. The fingerprint system consists of heterogeneous **gRPC** services written in Java, Python, C++ as well as Redis, Cassandra and SeaweedFS.
 - **Matching Server Fault Tolerance:** Designed and implemented auto discovery of online/offline **dockerized** matching servers through **Consul** and **Registrator**, which triggers segment redistribution among matching servers and segment recovery from Ceph Filesystem.
 - **Controller Fault Tolerance:** Designed and implemented Controller **Active/Standby Failover** through **Consul's Leader Election**.
- **Barclays Capital Services (Java)** Singapore
Software Engineer Jun 2014 - Dec 2017
 - **Trade Reporting Processor:** Developed Trade Reporting Processor that retrieves and applies trade reporting obligations. Implemented caching of index constituents using **Google Guava** that cut down query time by 50%.
 - **Market Object and Static Services:** Developed a greenfield market data calculation application which used **Redis** for caching, **Elasticsearch** for logging and **Akka** for concurrency.
 - **Sparta Automatic Deployment:** Fully automated Sparta deployment to 24 servers across 5 countries that used to be manual and sluggish. This consisted of migrating Sparta from **Perforce** to **Git** version control system, and implementing continuous deployment through **TeamCity** and **Nolio**.

PROJECTS

- **Online Bulletin Board (React, Redux, Tornado):** Implemented post sorting by tag and post searching features using **React**, **Redux** and **Tornado**.
- **Emergency Social Network (Angular, Node.js, MongoDB):** Developed a chat application that public chat, private chat, post announcement, share status, user administration and emergency contacts features. Used **Angular** and **Angular Material** for frontend, **Express.js** and **Node.js** for backend, **MongoDB** for database.
- **Face Fengshui App (Android):** Independently developed an **Android** application that performs face recognition on a person's selfie to predict his/her fortune and temperament based on face reading techniques.
- **Malloc (C):** Independently implemented a **dynamic memory allocator** using **segregated free list** that achieved 74.1% memory utilization and 20,000 throughput.
